	Requirements and Guidance					ssessment				
W-HTX Element/Pg #	W-HTX Requirements and Guidance not included in CQI-9	CQI-9 section	Objective Evidence	NA	Satisfactory	Not Satisfactory	Needs Immediate Action			
Scope (pg 7)	CQI-9 assessment and Ford Specific CQI-9 assessment is also to be completed for brazing and sintering.	Scope 1.2	Brazing & Sintering not done at BTP Kit.	N/A						
Carburizing/ Carbonitriding/ Carbon Correction (pg 24)	 Alarms, if used for process monitoring, must be set at acceptable control limits. Quench media Soluble oil: Concentration must be checked daily. Quench media Soluble oil: Suspended solids must be checked semi-annually. Microstructure for batch heat treat must be checked per batch and when any of the process parameters are out of spec. 	Process Table A	Alarms for process monitoring are set at acceptable control limits. APCO Quench Brite A certified oil is used in all AFC furnaces, Quench oil temperature is checked daily and recorded and also it is continuously recorded on Trend Server Pro. Quench Oil in use is also analyzed quarterly for viscosity, sludge %, moisture PPM, flash point, quench analyzer cooling curve. Microstructure is checked when the process parameters are out of spec. or as per customer requirement.		Satisfactory					
Neutral Hardening (pg 26)	 Alarms, if used for process monitoring, must be set at acceptable control limits. Quench media Soluble oil: Concentration must be checked daily. Quench media Soluble oil: Suspended solids must be checked semi-annually. 	Process Table A	Alarms for process monitoring are set at acceptable control limits. APCO Quench Brite A certified oil is used in all AFC furnaces, Quench oil temperature is checked daily and recorded and also it is continuously recorded on Trend Server Pro. Quench Oil in use is also analyzed quarterly for viscosity, sludge %, moisture PPM, flash point, quench analyzer cooling curve.		Satisfactory					
Tempering/Stress Relieving/ Annealing/Normalizing/ Solution Heat Treat/Age Hardening (pg 27, 29, 30)	- Alarms, if used for process monitoring, must be set at acceptable control limits.	Process Table A and E	Alarms for process monitoring are set at acceptable control limits.		Satisfactory					

Ford Specific CQI-9 requirements									
Requirements and Guidance						Assessment			
W-HTX Element/Pg #	W-HTX Requirements and Guidance not included in CQI-9	CQI-9 section	Objective Evidence	NA	Satisfactory	Not Satisfactory	Needs Immediate Action		
Nitriding/ Nitrocarburizing (pg 28)	 Alarms, if used for process monitoring, must be set at acceptable control limits. Dissociation of ammonia must be checked in gas nitriding twice a shift and after any change (or per batch). Gas ratios for ferritic nitorocarburizing must be checked twice a shift and after any change (or per batch). 	Process Table B	All processes are computer / recipe controlled. Alarms for process monitoring are set at acceptable control limits. Nitriding is not performed at BTP Kitchener. Gas Ratios for ferritic nitrocarburizing must be checked twice a shift and after any change (or per batch), needs to be addressed.		Satisfactory				
Brazing/Sintering (pg 31)	Assess Brazing/Sintering heat treat processes per Attachment 1 for WHTX - Brazing & Sintering Process Table.	Scope 1.2		N/A					
Vacuum Carburizing (pg 25)	Assess Vacuum Carburizing heat treat processes per Attachment 2 for WHTX - Vacuum Carburizing Process Table.	Scope 1.2		N/A					
Salt Bath (pg 32)	 Alarms, if used for process monitoring, must be set at acceptable control limits. Bath activity and exhaust smoke analysis must be done every batch and after any change. Visual condition of quench media must be checked each shift. Quench media Soluble oil: Concentration must be checked daily. Quench media Soluble oil: Suspended solids must be checked semi-annually. 	Process Table A and B		N/A					

Ford Specific CQI-9 requirements									
	Requirements and Guidance	е			A	ssessment			
W-HTX Element/Pg #	W-HTX Requirements and Guidance not included in CQI-9	CQI-9 section	Objective Evidence	NA	Satisfactory	Not Satisfactory	Needs Immediate Action		
Induction (pg 33)	 Cycle time must be visually checked and logged twice a shift and after any change. In the absence of an alarm system for high and low control limits quench media temperature must be checked and logged each shift and after any change. Quench level must be checked each shift and after any change. Quench media Soluble oil: Concentration must be checked daily. Quench media Soluble oil: Suspended solids must be checked on semi-annual bases. Quench media Oil: Water content, Suspended solids, Viscosity, Quenchability, Flash and fire point must be checked on semi-annual bases. Flame processes: Oxygen to fuel ratio shall be monitored and recorded. 	Process Table D		N/A					
Loading rate and cycle parameters (pg 15)	Control plan must have maximum delay between quench and temper and it must be monitored and logged.	2.7; A3.8; B3.9; C3.4; E3.7	Quench Delay: All our batch furnaces have an integral quench system that is automated. An alarm sounds should a delay occur between furnace chamber and quench media. Quench / Temper delay: In/Out times are recorded on Work Order. Quench / Temper delay window is noted on job card.		Satisfactory				
Processing temperature (pg 11)	Overtemp/Undertemp (when applicable) must be set at 50 deg F over the process set temperature to protect material and furnace from overheating.	N/A	Overtemp is set with in 50 deg F over the process set temperature.		Satisfactory

	Requirements and Guidance							
W-HTX Element/Pg #	W-HTX Requirements and Guidance not included in CQI-9	CQI-9 section	Objective Evidence	NA	Satisfactory	Not Satisfactory	Needs Immediate Action	
Monitor of carbon atmosphere (pg 11)	Dew point test is not acceptable for inverted delta parts.	A3.3; A3.4; B3.2; B3.3;	We use carbon probes and the carbon probes are verified daily. In the event of a carbon deviation an alarm sounds (audio / visual). Carbon trending is recorded using Trend Server Pro. Operators verify and record on Form KIT 552 every 2 hours.		Satisfactory			
Furnace atmosphere (pg 12, 13)	If applicable, refrigerator temperature must be monitored. Check furnace conditions for positive internal furnace pressure. Check furnace conditions for presence of air and gas leaks.	3.7	Furnace conditions are checked for internal furnace pressure and for presence of air and gas leaks.		Satisfactory			
Condition of quench (pg 15)	Additions to quench systems must be recorded in logging record.	3.14	Quench systems are regularly monitored and logged.		Satisfactory

Requirements and Guidance						Assessment				
W-HTX Element/Pg #	W-HTX Requirements and Guidance not included in CQI-9	CQI-9 section	Objective Evidence	NA	Satisfactory	Not Satisfactory	Needs Immediate Action			
Rules for checking service T/C (SAT test) and temperature instrumentation (pg 34)	The calibrated test thermocouple must be placed adjacent to the service thermocouple with the two junctions within 2 inches of each other. The test results of the instrument, thermocouple, and protection tube checks must be appropriately logged. The date that a given thermocouple or protection tube is replaced must be recorded. Service Thermocouples should be checked in place at their normal operating temperatures (not by removing the thermocouples from the normal operating temperature and checking them at a lower temperature).	of the applicable	SAT test results of the instruments, service thermocouples are recorded and appropriately logged. The calibrated test thermocouple and the service thermocouple junctions are within 2 inches of each other. Thermocouples are checked at their normal operating temperatures and their replacement date is recorded.		Satisfactory					
Microstructure (pg 17, 22)	At the minimum, microstructure must be checked @ 100X and 500X. Visual standards are required. Results must be recorded.	Item # 4.0 of the applicable Process Table	Microstructure is checked @ 100X and 400X. Mictostructure is recorded as a saved file. Visual standards as aids are available (Heat Treater Guide for Ferrous and non-Ferrous, as well as standard as supplied by customer)		Satisfactory

W-HTX Element/Pg #	W-HTX Requirements and Guidance not included in CQI-9	CQI-9 section	Objective Evidence	NA	Satisfactory	Not Satisfactory	Needs Immediate Action	
Hardness (pg 18, 23)	- When tempering is done immediately after the quenching, the testing may be done after tempering rather than after both quenching and tempering. The heat treater shall maintain average and range or other statistical charts as appropriate for hardness to detect trends in the process and to serve as a quality record. File, Rockwell, or Brinell scale shall be used as indicated on the Engineering Drawing unless the affected Product Engineering Office permits the use of an alternative hardness scale and the change is noted in the control plan. Surface hardness testing with files (refer to SAE J864), where an indentation hardness test is not specified and/or for purposes of correlation, shall only be used if authorized by the affected Ford Supplier Technical Assistance (STA) engineer. When checking the hardness tester with certified blocks the distance between the centers of two adjacent indentations shall be at least three times the diameter of the indentation and the distance to the edge of the test piece shall be at least two and a half times the diameter of the indentation.	Item # 4 of the applicable Process Table	Tempering is done immediately after quench. Testing is done after tempering or otherwise after both quenching and tempering. File, Rockwell, or Brinell scale is used as indicated on Control Plan. When checking the hardness tester with certified blocks the distance between the centers of two adjacent indentations is at least three times the diameter of the indentation and the distance to the edge of the test piece is at least two and a half times the diameter of the indentation.		Satisfactory			
Case Depth (pg18, 23)	Case depth checks may be made on production parts or test bars provided correlation to production parts has been established. However, case depth for induction and flame processes must be checked on production parts. Case depth records shall be maintained on average-range or other statistical charts as appropriate to detect trends in the process and to serve as a quality record.	Item # 4 of the applicable Process Table	Case depth checks are made on		Satisfactory

	Requirements and Guidano	e			Α	ssessment		
W-HTX Element/Pg #	W-HTX Requirements and Guidance not included in CQI-9	CQI-9 section	Objective Evidence	NA	Satisfactory	Not Satisfactory	Needs Immediate Action	
Induction/Flame Pattern (pg 23)	The surface and cross-sectional pattern shall be checked as required by the Engineering Drawing or in-process specification.	Item # 4 of the Process Table D		N/A				

The objective of CQI-9 and WHTX is to define the requirements and to encourage Best Practices which will assure a quality part as well as promoting continuous improvement relative to quality and productivity. Exceptions to the CQI-9 and WHTX requirements or reductions of sampling strategies for control of heat treating processes may be used, provided they afford adequate protection of a process currently proven to be stable and capable, and have the concurrence of the affected Ford Supplier Technical Assistant (STA) engineer and/or Quality Planning Team and are documented in a control plan.
